SUMMARY

Full stack web developer and U.S. Marine veteran who enjoys working under pressure and delivering quality work on time. Every day I bring a high level of motivation, leadership and clear lines of communication.

Strengths include integrating features into web applications and error resolution.

PROJECTS

Paws & Found: Pet finder app created by a small team at devCodeCamp. Built with ASP.NET, MVC5, SQL and the Entity Framework. Utilizing “code-first” migrations, users can post and chat about lost pets. Features include Google Maps API, Stripe API and Google SMTP Mail Service.

https://github.com/waders92/dcc_paws_and_found

Dungeon Hunter: A dungeon-themed dice game played in the browser utilizing DOM manipulation. Built with JavaScript, jQuery, HTML5 and CSS-3.

<https://github.com/waders92/dccDiceGame>

TrakStats: A golf stat tracking app built with Ruby on Rails, TDD, JavaScript, jQuery and PostgreSQL. Hosted on Heroku the apps features include notification mailers, video uploading and integration with the Stripe API for online golf lesson payments.

<https://github.com/waders92/golfstats>

Cattastic: A cat photo sharing application built with Ruby on Rails, TDD and PostgreSQL. Features include Devise for User Authentication, AWS S3 Buckets for photo hosting and Acts As Voteable gem for “Likes”.

SKILLS

C#
Visual Studio
.NET
Ruby
Rails
HTML5
CSS-3
JavaScript
Node.js
jQuery
SQL
PostgreSQL
Heroku
AWS S3
Git

WORK EXPERIENCE

Instructor, devCodeCamp

March 2018 – Current

Instructor for students progressing through 12 weeks of challenging, project-based learning utilizing HTML5, JavaScript, SQL, C# and ASP.NET MVC 5.

- Demonstrate C# and JavaScript best-practices
- Exhibit common refactoring techniques
- Provide insight on Git and project workflow
- Assist in de-bugging and error resolution
- Give lectures
- Grade student assignments

UpWork, Freelance Web Developer

Aug 2017 – Sep 2017

Completed a Rails upgrade (4.2 to 5.1) for Keylime Toolbox in Seattle, WA.

- Setup development environment utilizing 3 PostgreSQL databases
- Fixed deprecation warnings and ensured over 4000 Rspec tests passed
- Made small commits to keep the history clean
- Opened a pull request and fixed Merge Conflicts
